

Customer Success Story – Broadband & Telecoms

The client

The New Register Office.

“ Everyone we worked with in the Multidata team performed brilliantly as did the ADSL/phone lines they delivered. Their hand holding really helped us through what could have been a stressful time. Our deadlines were immovable and they met every one of them ”

Lorraine Heath, Deputy Superintendent

The issue

When Swindon Borough Council decided to move their Register Office to a prestigious new location within the Civic Centre, they had to work out how best to manage the increased requirements for phone lines and WAN and LAN connections whilst meeting tight budgets and project timelines. In addition since one of the councils' main aims was to create probably the best equipped Register Office in the country with CCTV Wedding Webcasts and state of the art On-line Digital Displays for legal notices, choosing the right communications and networking partner was crucial.

Our solution

Step forward Multidata, Swindons' very own "business only" ISP and Telecoms provider with a long history of supplying solutions to Local Government. Acting as project managers for all the communications requirements, we worked with other external partners such as digital screen suppliers, burglar alarm suppliers and webcam/music system suppliers to tie everything together on time and on budget. We installed multiple ISDN phone lines, low contention broadband and various ADSL hardware. Everything was tested well before the "Grand Opening" that was covered extensively in the press.

The result

Swindon Borough Council now has the best technologically equipped (and most beautifully appointed) Register Office in the UK. At the heart of this triumph is the Multidata supplied broadband and telecoms.
